American College of Radiology (ACR) Appropriateness Criteria[®]

Medical appropriateness criteria are available to help referring physicians and other providers determine the most appropriate imaging procedure in a specific situation.

One of the best known set of criteria is the evidence-based American College of Radiology (ACR) Appropriateness Criteria[®]. These criteria are available online and can be accessed at www.acr.org under “Quality and Patient Safety, ACR Appropriateness Criteria[®]” or by clicking on the link below.

Use of these criteria can help a practicing physician determine the most appropriate imaging study to use in order to improve patient outcomes and safety.
