FORTEO® (teriparatide) INJECTION

Non-Discrimination Statement and Multi-Language Interpreter Services information are located at the end of this document.

Coverage for services, procedures, medical devices and drugs are dependent upon benefit eligibility as outlined in the member's specific benefit plan. This Medical Coverage Guideline must be read in its entirety to determine coverage eligibility, if any.

This Medical Coverage Guideline provides information related to coverage determinations only and does not imply that a service or treatment is clinically appropriate or inappropriate. The provider and the member are responsible for all decisions regarding the appropriateness of care. Providers should provide BCBSAZ complete medical rationale when requesting any exceptions to these guidelines.

The section identified as “Description” defines or describes a service, procedure, medical device or drug and is in no way intended as a statement of medical necessity and/or coverage.

The section identified as “Criteria” defines criteria to determine whether a service, procedure, medical device or drug is considered medically necessary or experimental or investigational.

State or federal mandates, e.g., FEP program, may dictate that any drug, device or biological product approved by the U.S. Food and Drug Administration (FDA) may not be considered experimental or investigational and thus the drug, device or biological product may be assessed only on the basis of medical necessity.

Medical Coverage Guidelines are subject to change as new information becomes available.

For purposes of this Medical Coverage Guideline, the terms "experimental" and "investigational" are considered to be interchangeable.

BLUE CROSS®, BLUE SHIELD® and the Cross and Shield Symbols are registered service marks of the Blue Cross and Blue Shield Association, an association of independent Blue Cross and Blue Shield Plans. All other trademarks and service marks contained in this guideline are the property of their respective owners, which are not affiliated with BCBSAZ.
FORTEO (teriparatide) INJECTION (cont.)

Description:

Forteo is a synthetic form of human parathyroid hormone that is the primary regulator of bone and mineral metabolism. Forteo may be used for treatment of osteoporosis in postmenopausal women, to increase bone mass in men with osteoporosis and for treatment of women and men with osteoporosis associated with sustained systemic glucocorticoid therapy. Generally, Forteo is given as a 2 year course of treatment.

Definitions:

Adult: Age 18 years and older

Criteria:

See Resources section for FDA-approved dosage.

Osteoporosis:

➢ Forteo is considered medically necessary with documentation of ALL of the following:

1. ONE of the following:
   - Postmenopausal female with osteoporosis at high risk for fracture
   - Male with primary osteoporosis OR hypogonadal osteoporosis at high risk for fracture

2. T-score of -2.5 or worse (e.g., -3.0, -3.5)
3. Absence of ALL of the following:
   - Active nephrolithiasis
   - End-stage renal disease
   - Open epiphyses
   - Osteomalacia
   - Paget's disease of bone
   - Primary or metastatic bone cancer or history of skeletal malignancies
   - Metabolic bone diseases other than osteoporosis
   - Unexplained elevation of serum calcium or alkaline phosphatase prior to initiation of therapy
   - Pre-existing hypercalcemic disorder (e.g., hyperparathyroidism)
   - History of external beam radiation involving the skeleton OR for a soft tissue malignancy, such as breast cancer, where the radiation would likely have affected the skeleton around the area
   - History of implant radiation (e.g., brachytherapy, interstitial radiation, intracavitary radiation)

4. Absence of hypersensitivity to teriparatide or any of its excipients
FORTEO (teriparatide) INJECTION (cont.)

Criteria: (cont.)

Osteoporosis: cont.)

- As Forteo is generally a 2 year course of treatment, the second year of Forteo therapy may be approved if the above criteria were met for the initial year.

- Review by the clinical pharmacist, and/or medical director(s) and/or clinical advisor(s) is required for course of therapy beyond 2 years.

Glucocorticoid-Induced Osteoporosis:

- Forteo is considered medically necessary for treatment of osteoporosis in men or women at high risk for fracture ¹ with documentation of ALL of the following:

  1. **ONE** of the following:
     - T-score of -2.0 or worse (e.g., -2.5, -3.0) at the lumbar spine or total hip
     - T-score of -1.0 or worse (e.g., -1.5, -2.0) and at least 1 fragility fracture ² during treatment with glucocorticoids

  2. Osteoporosis is associated with sustained glucocorticoid therapy defined as daily Prednisone dosing of 5 mg or greater for a minimum of 3 months

  3. Absence of ALL of the following:
     - Active nephrolithiasis
     - End-stage renal disease
     - Open epiphyses
     - Osteomalacia
     - Paget’s disease of bone
     - Primary or metastatic bone cancer or history of skeletal malignancies
     - Metabolic bone diseases other than osteoporosis
     - Unexplained elevation of serum calcium or alkaline phosphatase prior to initiation of therapy
     - Pre-existing hypercalcemic disorder (e.g., hyperparathyroidism)
     - History of external beam radiation involving the skeleton or for a soft tissue malignancy, such as breast cancer, where the radiation would likely have affected the skeleton around the area
     - History of implant radiation (e.g., brachytherapy, interstitial radiation, intracavitary radiation)

  4. Absence of hypersensitivity to teriparatide or any of its excipients

- Review by the clinical pharmacist, and/or medical director(s) and/or clinical advisor(s) is required for course of therapy beyond 3 years.
FORTEO (teriparatide) INJECTION (cont.)

Criteria: (cont.)

Other:

➢ Forteo for all other indications not previously listed or if above criteria not met is considered experimental or investigational based upon:

1. Insufficient scientific evidence to permit conclusions concerning the effect on health outcomes, and
2. Insufficient evidence to support improvement of the net health outcome.

These indications include, but are not limited to:

• Treatment with dosing or frequency outside the FDA-approved dosing and frequency

1 High risk for fracture is defined as ONE of the following:

• Osteoporotic fracture
• Multiple risk factors for fracture (significantly low bone mass, frequent falls, limited movement, medical conditions likely to cause bone loss, medicines that may cause bone loss, e.g., seizure medicines, blood thinners, steroids, high doses of vitamins A or D)
• Failed response (as defined by prescribing provider) to previous osteoporosis therapy
• Intolerant to previous osteoporosis therapy

2 A fracture occurring spontaneously or after a minor trauma.

Resources:

Literature reviewed 12/19/17. We do not include marketing materials, poster boards and non-published literature in our review.
