ELECTRIC TUMOR TREATMENT FIELDS

Non-Discrimination Statement and Multi-Language Interpreter Services information are located at the end of this document.

Coverage for services, procedures, medical devices and drugs are dependent upon benefit eligibility as outlined in the member's specific benefit plan. This Medical Coverage Guideline must be read in its entirety to determine coverage eligibility, if any.

This Medical Coverage Guideline provides information related to coverage determinations only and does not imply that a service or treatment is clinically appropriate or inappropriate. The provider and the member are responsible for all decisions regarding the appropriateness of care. Providers should provide BCBSAZ complete medical rationale when requesting any exceptions to these guidelines.

The section identified as “Description” defines or describes a service, procedure, medical device or drug and is in no way intended as a statement of medical necessity and/or coverage.

The section identified as “Criteria” defines criteria to determine whether a service, procedure, medical device or drug is considered medically necessary or experimental or investigational.

State or federal mandates, e.g., FEP program, may dictate that any drug, device or biological product approved by the U.S. Food and Drug Administration (FDA) may not be considered experimental or investigational and thus the drug, device or biological product may be assessed only on the basis of medical necessity.

Medical Coverage Guidelines are subject to change as new information becomes available.

For purposes of this Medical Coverage Guideline, the terms "experimental" and "investigational" are considered to be interchangeable.

ELECTRIC TUMOR TREATMENT FIELDS (cont.)

Description:

Electrical field therapy also referred to as Tumor Treatment Field (TTF) therapy exposes cancer cells to alternating electric fields of low intensity and intermediate frequency using insulated electrodes placed on the skin surrounding the region of a malignant tumor to inhibit tumor growth and reduce tumor angiogenesis. TTF inhibit rapidly dividing tumor cells by arrest of cell proliferation and destruction of cells while undergoing division.

FDA-approved TTF devices, include, but are not limited to:

▪ NovoTTF™-100A System
▪ Optune®

Criteria:

➢ Electric tumor fields for the treatment of histologically-confirmed glioblastoma multiforme (GBM) is considered medically necessary as adjunctive treatment with documentation of ANY of the following:

1. Newly diagnosed glioblastoma in combination with temozolomide following debulking surgery, completion of radiation therapy together with concomitant standard of care chemotherapy
2. Confirmed recurrence of GBM

➢ Electric tumor treatment fields for the treatment of other malignant tumors or if criteria above not met is considered experimental or investigational based upon:

1. Insufficient scientific evidence to permit conclusions concerning the effect on health outcomes, and
2. Insufficient evidence to support improvement of the net health outcome, and
3. Insufficient evidence to support improvement of the net health outcome as much as, or more than, established alternatives, and
4. Insufficient evidence to support improvement outside the investigational setting.
