HUMAN EPIDIDYMIS PROTEIN 4 (HE4)

Non-Discrimination Statement and Multi-Language Interpreter Services information are located at the end of this document.

Coverage for services, procedures, medical devices and drugs are dependent upon benefit eligibility as outlined in the member's specific benefit plan. This Medical Coverage Guideline must be read in its entirety to determine coverage eligibility, if any.

This Medical Coverage Guideline provides information related to coverage determinations only and does not imply that a service or treatment is clinically appropriate or inappropriate. The provider and the member are responsible for all decisions regarding the appropriateness of care. Providers should provide BCBSAZ complete medical rationale when requesting any exceptions to these guidelines.

The section identified as "Description" defines or describes a service, procedure, medical device or drug and is in no way intended as a statement of medical necessity and/or coverage.

The section identified as "Criteria" defines criteria to determine whether a service, procedure, medical device or drug is considered medically necessary or experimental or investigational.

State or federal mandates, e.g., FEP program, may dictate that any drug, device or biological product approved by the U.S. Food and Drug Administration (FDA) may not be considered experimental or investigational and thus the drug, device or biological product may be assessed only on the basis of medical necessity.

Medical Coverage Guidelines are subject to change as new information becomes available.

For purposes of this Medical Coverage Guideline, the terms "experimental" and "investigational" are considered to be interchangeable.

Description:

Human epididymis protein 4 (HE4) is a biomarker that has been found to be over-expressed by epithelial ovarian cancer tumors and circulate in the serum of individuals with epithelial ovarian cancer. HE4 testing has been investigated as a replacement or complement to CA-125 testing to identify and manage individuals with ovarian cancer. ARCHITECT™ HE4 test is FDA-approved.

HUMAN EPIDIDYMIS PROTEIN 4 (HE4) (cont.)

Criteria:

For HE4 performed as part of the Risk of Ovarian Malignancy Algorithm (ROMA) test, see BCBSAZ Medical Coverage Guideline #O584, "*Multimarker Serum Testing Related to Ovarian Cancer*".

- HE4 measurement for all indications is considered *experimental or investigational* based upon:
1. Insufficient scientific evidence to permit conclusions concerning the effect on health outcomes, and
 2. Insufficient evidence to support improvement of the net health outcome, and
 3. Insufficient evidence to support improvement of the net health outcome as much as, or more than, established alternatives, and
 4. Insufficient evidence to support improvement outside the investigational setting.

These indications include, *but are not limited to*:

- Diagnosing malignant disease in women with signs or symptoms suggestive of ovarian cancer
- Monitoring disease progression or recurrence in women diagnosed with epithelial ovarian cancer
- Screening asymptomatic women for ovarian cancer
