DECISIONDx BIOMARKER TESTS

Non-Discrimination Statement and Multi-Language Interpreter Services information are located at the end of this document.

Coverage for services, procedures, medical devices and drugs are dependent upon benefit eligibility as outlined in the member’s specific benefit plan. This Medical Coverage Guideline must be read in its entirety to determine coverage eligibility, if any.

This Medical Coverage Guideline provides information related to coverage determinations only and does not imply that a service or treatment is clinically appropriate or inappropriate. The provider and the member are responsible for all decisions regarding the appropriateness of care. Providers should provide BCBSAZ complete medical rationale when requesting any exceptions to these guidelines.

The section identified as “Description” defines or describes a service, procedure, medical device or drug and is in no way intended as a statement of medical necessity and/or coverage.

The section identified as “Criteria” defines criteria to determine whether a service, procedure, medical device or drug is considered medically necessary or experimental or investigational.

State or federal mandates, e.g., FEP program, may dictate that any drug, device or biological product approved by the U.S. Food and Drug Administration (FDA) may not be considered experimental or investigational and thus the drug, device or biological product may be assessed only on the basis of medical necessity.

Medical Coverage Guidelines are subject to change as new information becomes available.

For purposes of this Medical Coverage Guideline, the terms "experimental" and "investigational" are considered to be interchangeable.

All other trademarks and service marks contained in this guideline are the property of their respective owners, which are not affiliated with BCBSAZ.
DECISIONDx BIOMARKER TESTS (cont.)

Description:

DecisionDx tests (Castle Biosciences, Inc.) are proprietary biomarker based gene expression profile (GEP) tests that are being investigated to assist in prognosis and treatment of various cancers.

DecisionDx tests include DecisionDx-EC for esophageal cancer, DecisionDx-GBM for glioblastoma multiforme, DecisionDx-Melanoma, DecisionDx-Mesothelioma, DecisionDx-Thymoma and DecisionDx-UM for uveal melanoma (also known as ocular or choroidal melanoma).

Definitions:

Gene Expression:
The translation of the information encoded in a gene into messenger RNA (mRNA) which may or may not then be translated into a protein.

Gene:
A hereditary unit consisting of segments of DNA that occupies a specific location on chromosomes. Genes undergo mutation when their DNA sequence changes.

Genetic Counseling:
Instruction that provides interpretation of genetic tests and information about courses of action that are available for the care of an individual with a genetic disorder or for future family planning.

Affected Individual:
An individual displaying signs or symptoms characteristic of a suspected or specific inherited disorder.

Unaffected Individual:
An individual who displays no signs or symptoms characteristic of a suspected or specific inherited disorder.

Screening:
Genetic screening is the testing of an individual with no symptoms for a specific inherited disorder to determine if the individual carries an abnormal gene. Screening can be used to predict risk or potential risk for the individual or their offspring.
DECISIONDx BIOMARKER TESTS (cont.)

Criteria:

For DecisionDx-Melanoma test, see BCBSAZ Medical Coverage Guideline #O995, “Gene Expression Profiling for Cutaneous Melanoma”.

- Genetic testing and/or counseling of an unaffected individual, regardless of risk factors is considered screening and not eligible for coverage.
- Genetic testing and/or counseling of an affected individual to confirm a disease when confirmation of the diagnosis would not impact the care and/or management is considered not medically necessary and not eligible for coverage.
- Gene expression profiling for uveal melanoma with DecisionDx-UM is considered medically necessary for an individual with primary, localized uveal melanoma.
- Gene expression profiling DecisionDx biomarker tests for all other indications not previously listed or if above criteria not met are considered experimental or investigational based upon:
  1. Insufficient scientific evidence to permit conclusions concerning the effect on health outcomes, and
  2. Insufficient evidence to support improvement of the net health outcome, and
  3. Insufficient evidence to support improvement of the net health outcome as much as, or more than, established alternatives, and
  4. Insufficient evidence to support improvement outside the investigational setting.

These biomarkers tests include, but are not limited to:

- DecisionDx-EC
- DecisionDx-GBM
- DecisionDx-Mesothelioma
- DecisionDx-Thymoma
