OXYGEN THERAPY

▪ Hyperbaric Oxygen Therapy (HBO₂)
▪ Mild Hyperbaric Therapy
▪ Topical Oxygen Therapy

Non-Discrimination Statement and Multi-Language Interpreter Services information are located at the end of this document.

Coverage for services, procedures, medical devices and drugs are dependent upon benefit eligibility as outlined in the member's specific benefit plan. This Medical Coverage Guideline must be read in its entirety to determine coverage eligibility, if any.

This Medical Coverage Guideline provides information related to coverage determinations only and does not imply that a service or treatment is clinically appropriate or inappropriate. The provider and the member are responsible for all decisions regarding the appropriateness of care. Providers should provide BCBSAZ complete medical rationale when requesting any exceptions to these guidelines.

The section identified as “Description” defines or describes a service, procedure, medical device or drug and is in no way intended as a statement of medical necessity and/or coverage.

The section identified as “Criteria” defines criteria to determine whether a service, procedure, medical device or drug is considered medically necessary or experimental or investigational.

State or federal mandates, e.g., FEP program, may dictate that any drug, device or biological product approved by the U.S. Food and Drug Administration (FDA) may not be considered experimental or investigational and thus the drug, device or biological product may be assessed only on the basis of medical necessity.

Medical Coverage Guidelines are subject to change as new information becomes available.

For purposes of this Medical Coverage Guideline, the terms "experimental" and "investigational" are considered to be interchangeable.

BLUE CROSS®, BLUE SHIELD® and the Cross and Shield Symbols are registered service marks of the Blue Cross and Blue Shield Association, an association of independent Blue Cross and Blue Shield Plans. All other trademarks and service marks contained in this guideline are the property of their respective owners, which are not affiliated with BCBSAZ.
OXYGEN THERAPY (cont.)

Description:

Hyperbaric Oxygen Therapy (HBOT, HBO₂):
Individual is entirely enclosed in a pressure chamber and breathes 100% oxygen at a pressure greater than oxygen pressure at sea level. The pressurized oxygen is forced to affected tissues, infections, injuries and sources of disease to aid the body in healing.

Mild Hyperbaric Therapy (mHBT, mHBOT):
Individual is enclosed in an inflatable chamber and breathes filtered ambient air at increased atmospheric pressure. May be supplemented with additional oxygen.

Topical Oxygen Therapy:
A specially designed inflatable, clear plastic bag is positioned and secured around the wound area creating a "topical hyperbaric oxygen chamber". 100% oxygen at a pressure greater than oxygen pressure at sea level is then pumped into the bag directly to the open, moist wound.

Definitions:

Chronic Wound:
A wound or condition present for at least 30 days despite standard medical and surgical management.

Refractory Wound:
A wound or condition that is resistant to or has failed standard medical or surgical management.

Wagner Classification System of Wounds:

- Grade 0: No open lesion
- Grade I: Superficial ulcer without penetration to deeper layers
- Grade II: Ulcer penetrates to tendon, bone or joint
- Grade III: Lesion has penetrated deeper than grade II and there is abscess, osteomyelitis, pyarthrosis, plantar space abscess, or infection of the tendon and tendon sheaths
- Grade IV: Wet or dry gangrene in the toes or forefoot
- Grade V: Gangrene involves the whole foot or such a percentage that no local procedures are possible and amputation (at least at the below the knee level) is indicated
OXYGEN THERAPY (cont.)

Criteria:

Hyperbaric Oxygen Therapy:

- Hyperbaric oxygen therapy (HBO₂, HBOT) is considered medically necessary for treatment of ANY of the following:

  1. Exceptional blood loss anemia and transfusion is impossible or must be delayed
  2. Carbon monoxide poisoning, acute
  3. Compromised skin grafts or flaps
  4. Cyanide poisoning, acute
  5. Decompression illness
  6. Gas embolism, acute
  7. Gas gangrene
  8. Mycoses, refractory (mucormycosis, actinomycosis, canidiobolus coronato)
  9. Necrotizing infections, progressive (e.g., necrotizing fascitis)
  10. Nonhealing diabetic wounds of the lower extremities with documentation of ALL of the following:
      - Type I or II diabetes with a lower-extremity wound due to diabetes
      - Wound is classified as Wagner grade III or greater
      - No measurable signs of healing after a 30 day course of standard wound therapy

  11. Osteomyelitis, acute or chronic refractory
  12. Peripheral ischemia resulting from acute trauma (e.g., crushing injuries, reperfusion injury, compartment syndrome, suturing of severed limbs)
  13. Radiation injuries (cystitis enteritis, mucositis, myelitis or proctitis)
  14. Radiation necrosis (osteoradionecrosis, myoradionecrosis, and other soft tissue radiation necrosis)
OXYGEN THERAPY (cont.)

Criteria: (cont.)

Hyperbaric Oxygen Therapy: (cont.)

- Hyperbaric oxygen therapy (HBO₂, HBOT) for all other indications not previously listed or if above criteria not met is considered *experimental or investigational* based upon:

  1. Insufficient scientific evidence to permit conclusions concerning the effect on health outcomes, and
  2. Insufficient evidence to support improvement of the net health outcome, and
  3. Insufficient evidence to support improvement of the net health outcome as much as, or more than, established alternatives.

These indications include, *but are not limited to*:

- Acute ischemic stroke
- Acute surgical and traumatic wounds
- Amyotrophic lateral sclerosis (ALS)
- Arterial peripheral insufficiency, acute
- Autism spectrum disorders
- Bell's palsy
- Bisphosphonate-related osteonecrosis of the jaw
- Bone grafts
- Brain injury resulting from trauma
- Brown recluse spider bites
- Carbon tetrachloride poisoning, acute
- Cerebral edema, acute
- Cerebral Palsy
- Cerebrovascular accident/disease, acute (thrombotic or embolic) or chronic
- Coronary syndromes, acute or as an adjunct to percutaneous coronary interventions and cardiopulmonary bypass
- Delayed onset muscle soreness
- Diabetic ulcers, Grade I or II
- Early treatment (beginning at completion of radiotherapy) to reduce adverse effects of radiotherapy
- Femoral neck necrosis, idiopathic
- Fibromyalgia
- Fracture healing
- Herpes zoster
- Hydrogen sulfide poisoning
- Inflammatory bowel disease (Crohn disease or ulcerative colitis)
- Intra-abdominal and intra-cranial abscesses
- In vitro fertilization
OXYGEN THERAPY (cont.)

Criteria: (cont.)

**Hyperbaric Oxygen Therapy: (cont.)**

- Hyperbaric oxygen therapy (HBO₂, HBOT) for all other indications not previously listed or if above criteria not met is considered *experimental or investigational* based upon:
  1. Insufficient scientific evidence to permit conclusions concerning the effect on health outcomes, and
  2. Insufficient evidence to support improvement of the net health outcome, and
  3. Insufficient evidence to support improvement of the net health outcome as much as, or more than, established alternatives.

These indications include, *but are not limited to*: (cont.)

- Lepromatous leprosy
- Lymphedema, chronic arm, following radiotherapy for cancer
- Meningitis
- Mental illness (e.g., depression, generalized anxiety disorder, posttraumatic stress disorder)
- Migraine
- Motor dysfunction associated with stroke
- Multiple sclerosis
- Pseudomembranous colitis (antimicrobial agent-induced colitis)
- Pyoderma gangrenosum
- Retinal artery insufficiency, acute
- Retinopathy, adjunct to scleral buckling procedures in patients with sickle cell peripheral retinopathy and retinal detachment
- Sensorineural hearing loss, acute idiopathic
- Sickle cell crisis and/or hematuria
- Spinal cord injury
- Thermal burns, acute
- Tumor sensitization for cancer treatments (radiotherapy or chemotherapy)
- Vascular dementia
- Wounds, chronic

**Mild Hyperbaric Therapy:**

- Mild hyperbaric therapy (mHBOT, mHBT) for all indications is considered *not medically necessary* and *not eligible for coverage.*
OXYGEN THERAPY (cont.)

Criteria: (cont.)

Topical Oxygen Therapy:

- Topical oxygen therapy is considered *experimental or investigational* based upon:
  1. Insufficient scientific evidence to permit conclusions concerning the effect on health outcomes, and
  2. Insufficient evidence to support improvement of the net health outcome, and
  3. Insufficient evidence to support improvement of the net health outcome as much as, or more than, established alternatives.
