PHOTODYNAMIC THERAPY FOR TREATMENT OF CANCER

Non-Discrimination Statement and Multi-Language Interpreter Services information are located at the end of this document.

Coverage for services, procedures, medical devices and drugs are dependent upon benefit eligibility as outlined in the member's specific benefit plan. This Medical Coverage Guideline must be read in its entirety to determine coverage eligibility, if any.

This Medical Coverage Guideline provides information related to coverage determinations only and does not imply that a service or treatment is clinically appropriate or inappropriate. The provider and the member are responsible for all decisions regarding the appropriateness of care. Providers should provide BCBSAZ complete medical rationale when requesting any exceptions to these guidelines.

The section identified as "Description" defines or describes a service, procedure, medical device or drug and is in no way intended as a statement of medical necessity and/or coverage.

The section identified as "Criteria" defines criteria to determine whether a service, procedure, medical device or drug is considered medically necessary or experimental or investigational.

State or federal mandates, e.g., FEP program, may dictate that any drug, device or biological product approved by the U.S. Food and Drug Administration (FDA) may not be considered experimental or investigational and thus the drug, device or biological product may be assessed only on the basis of medical necessity.

Medical Coverage Guidelines are subject to change as new information becomes available.

For purposes of this Medical Coverage Guideline, the terms "experimental" and "investigational" are considered to be interchangeable.

Description:

Photodynamic therapy (PDT), also called phototherapy, photoradiotherapy, photosensitizing therapy, or photochemotherapy, is an ablative treatment consisting of administration of a photosensitizing agent (e.g., porfimer sodium [Photofrin®]) and subsequent exposure of tumor cells to a light source of a specific wavelength to induce cellular damage.

PHOTODYNAMIC THERAPY FOR TREATMENT OF CANCER (cont.)

Criteria:

- One or more courses of photodynamic therapy is considered **medically necessary** for **ANY** of the following oncologic applications:
 1. Palliative treatment of unresectable cholangiocarcinoma when used with stenting
 2. Palliative treatment of obstructing esophageal cancer
 3. Palliative treatment of obstructing endobronchial lesions
 4. Treatment of early-stage non-small cell lung cancer in an individual who is ineligible for surgery and radiation therapy
 5. Treatment of high-grade dysplasia in Barrett's esophagus

- Photodynamic therapy for all other indications not previously listed or if above criteria not met is considered **experimental or investigational** based upon:
 1. Lack of final approval from the Food and Drug Administration, and
 2. Insufficient scientific evidence to permit conclusions concerning the effect on health outcomes, and
 3. Insufficient evidence to support improvement of the net health outcome, and
 4. Insufficient evidence to support improvement of the net health outcome as much as, or more than, established alternatives.

These indications include, *but are not limited to*:

- Barrett's esophagus without associated high grade dysplasia
- Other malignancies
