## HYPERTHERMIC INTRAPERITONEAL CHEMOTHERAPY

---

Non-Discrimination Statement and Multi-Language Interpreter Services information are located at the end of this document.

Coverage for services, procedures, medical devices and drugs are dependent upon benefit eligibility as outlined in the member's specific benefit plan. This Medical Coverage Guideline must be read in its entirety to determine coverage eligibility, if any.

This Medical Coverage Guideline provides information related to coverage determinations only and does not imply that a service or treatment is clinically appropriate or inappropriate. The provider and the member are responsible for all decisions regarding the appropriateness of care. Providers should provide BCBSAZ complete medical rationale when requesting any exceptions to these guidelines.

The section identified as "Description" defines or describes a service, procedure, medical device or drug and is in no way intended as a statement of medical necessity and/or coverage.

The section identified as "Criteria" defines criteria to determine whether a service, procedure, medical device or drug is considered medically necessary or experimental or investigational.

State or federal mandates, e.g., FEP program, may dictate that any drug, device or biological product approved by the U.S. Food and Drug Administration (FDA) may not be considered experimental or investigational and thus the drug, device or biological product may be assessed only on the basis of medical necessity.

Medical Coverage Guidelines are subject to change as new information becomes available.

For purposes of this Medical Coverage Guideline, the terms "experimental" and "investigational" are considered to be interchangeable.

## HYPERTHERMIC INTRAPERITONEAL CHEMOTHERAPY (cont.)

### Description:

Cytoreductive surgery (CRS) involves exploration of the liver, diaphragm, stomach, abdomen, pelvic recesses and bowel and removal of all visible tumor deposits. CRS may be followed intraoperatively by the infusion of intraperitoneal chemotherapy in an effort to address remaining microscopic disease. When heated, this is referred to as hyperthermic intraperitoneal chemotherapy (HIPEC). Temperature probes, along with inflow and outflow catheters, are placed in the abdominal cavity and the skin is temporarily closed during the 1-2 hour chemotherapy perfusion.

---

### Criteria:

- Cytoreductive surgery plus hyperthermic intraperitoneal chemotherapy at the time of surgery is considered **medically necessary** with documentation of **ANY** of the following:
  1. Diffuse malignant peritoneal mesothelioma
  2. Pseudomyxoma peritonei
- Hyperthermic intraperitoneal chemotherapy is considered **medically necessary** in newly diagnosed stage III epithelial ovarian or fallopian tube cancer at the time of interval cytoreductive surgery with documentation of **ALL** of the following:
  1. Individual is not eligible for primary cytoreductive surgery or surgery had been performed but was incomplete and will receive neoadjuvant chemotherapy and subsequent interval debulking surgery
  2. It is expected that complete or optimal cytoreduction can be achieved at time of the interval debulking surgery
- Hyperthermic intraperitoneal chemotherapy in all other settings to treat ovarian cancer, including but not limited to stage IV ovarian cancer is considered **experimental or investigational** based upon:
  1. Insufficient scientific evidence to permit conclusions concerning the effect on health outcomes, and
  2. Insufficient evidence to support improvement of the net health outcome, and
  3. Insufficient evidence to support improvement of the net health outcome as much as, or more than, established alternatives, and
  4. Insufficient evidence to support improvement outside the investigational setting.

## HYPERTHERMIC INTRAPERITONEAL CHEMOTHERAPY (cont.)

### Criteria: (cont.)

- Cytoreductive surgery plus hyperthermic intraperitoneal chemotherapy for all other indications not previously listed or if above criteria not met is considered **experimental or investigational** based upon:
  1. Insufficient scientific evidence to permit conclusions concerning the effect on health outcomes, and
  2. Insufficient evidence to support improvement of the net health outcome, and
  3. Insufficient evidence to support improvement of the net health outcome as much as, or more than, established alternatives, and
  4. Insufficient evidence to support improvement outside the investigational setting.

These indications include, *but are not limited to*:

- Goblet cell tumors of the appendix
- Peritoneal carcinomatosis from colorectal cancer
- Peritoneal carcinomatosis from endometrial cancer
- Peritoneal carcinomatosis from gastric cancer
