HEMATOPOIETIC CELL TRANSPLANTATION FOR CENTRAL NERVOUS SYSTEM (CNS) EMBRYONAL TUMORS AND EPENDYMOMA

Non-Discrimination Statement and Multi-Language Interpreter Services information are located at the end of this document.

Coverage for services, procedures, medical devices and drugs are dependent upon benefit eligibility as outlined in the member's specific benefit plan. This Medical Coverage Guideline must be read in its entirety to determine coverage eligibility, if any.

This Medical Coverage Guideline provides information related to coverage determinations only and does not imply that a service or treatment is clinically appropriate or inappropriate. The provider and the member are responsible for all decisions regarding the appropriateness of care. Providers should provide BCBSAZ complete medical rationale when requesting any exceptions to these guidelines.

The section identified as “Description” defines or describes a service, procedure, medical device or drug and is in no way intended as a statement of medical necessity and/or coverage.

The section identified as “Criteria” defines criteria to determine whether a service, procedure, medical device or drug is considered medically necessary or experimental or investigational.

State or federal mandates, e.g., FEP program, may dictate that any drug, device or biological product approved by the U.S. Food and Drug Administration (FDA) may not be considered experimental or investigational and thus the drug, device or biological product may be assessed only on the basis of medical necessity.

Medical Coverage Guidelines are subject to change as new information becomes available.

For purposes of this Medical Coverage Guideline, the terms "experimental" and "investigational" are considered to be interchangeable.

**Description:**

High-dose chemotherapy with hematopoietic cell transplantation (HCT) has been investigated as a possible therapy in pediatric individuals with brain tumors, particularly in individuals with disease that is considered high risk. In addition, the use of HCT has allowed for a reduction in the dose of radiation needed to treat both average and high-risk disease, with preservation of quality of life and intellectual functioning, without compromising survival.
HEMATOPOIETIC CELL TRANSPLANTATION FOR CENTRAL NERVOUS SYSTEM (CNS) EMBRYONAL TUMORS AND EPENDYMOMA (cont.)

**Description:** (cont.)

Embryonal tumors include, *but are not limited to:*

- Atypical teratoid/rhabdoid tumor
- Ependymoblastoma
- Ependymoma
- Medulloblastoma
- Medulloepithelioma
- Primitive neuroectodermal tumors (PNETs): neuroblastoma, ganglioneuroblastoma, pinealblastoma

**Hematopoietic Cell Transplantation (HCT):**

Hematopoietic cells form blood and immune cells. HCT is a procedure in which hematopoietic cells are infused into a recipient with deficient bone marrow function. Bone marrow stem cells may be obtained from the transplant recipient (autologous HCT) or a donor (allogeneic HCT). They can be harvested from bone marrow, peripheral blood, or umbilical cord blood and placenta shortly after a delivery. HCT may also be referred to as bone marrow transplant (BMT).

**High-Dose Chemotherapy (HDC):**

HDC is the administration of myelotoxic agents at doses sufficient to cause bone marrow failure. Myeloablative chemotherapy eradicates cancerous cells from the blood and bone marrow and inhibits the immune response against the donor bone marrow. HDC may be given with or without total body radiation.

**Donor Types:**

- Allogeneic: From a third-party donor
- Autologous: From an individual's own bone marrow and/or circulating blood

**Definitions:**

**Tandem Transplant:**

Two successive cycles of high-dose chemotherapy, each followed by infusion of autologous stem cells, whether or not there is evidence of persistent disease following the first treatment.
HEMATOPOIETIC CELL TRANSPLANTATION FOR CENTRAL NERVOUS SYSTEM (CNS) EMBRYONAL TUMORS AND EPENDYMOMA (cont.)

Criteria:

All stem cell transplants will be reviewed by the medical director(s) and/or clinical advisor(s).

Embryonal Tumors of the CNS:

- HDC with autologous HCT for an individual with an embryonal tumor of the CNS is considered medically necessary with documentation of ALL of the following:
  1. Previously untreated tumor that shows partial or complete induction response to induction of chemotherapy
  2. Stable disease after induction therapy
  3. Recurrent CNS embryonal tumors

- If above criteria not met, HDC with autologous HCT for an individual with an embryonal tumor of the CNS is considered experimental or investigational based upon:
  1. Insufficient scientific evidence to permit conclusions concerning the effect on health outcomes, and
  2. Insufficient evidence to support improvement of the net health outcome, and
  3. Insufficient evidence to support improvement of the net health outcome as much as, or more than, established alternatives.

- HDC with allogeneic HCT for an individual with an embryonal tumor of the CNS is considered experimental or investigational based upon:
  1. Insufficient scientific evidence to permit conclusions concerning the effect on health outcomes, and
  2. Insufficient evidence to support improvement of the net health outcome, and
  3. Insufficient evidence to support improvement of the net health outcome as much as, or more than, established alternatives.
HEMATOPOIETIC CELL TRANSPLANTATION FOR CENTRAL NERVOUS SYSTEM (CNS) EMBRYONAL TUMORS AND EPENDYMOMA (cont.)

Criteria: (cont.)

**Embryonal Tumors of the CNS:** (cont.)

- Tandem autologous HCT for an individual with an embryonal tumor of the CNS is considered experimental or investigational based upon:
  1. Insufficient scientific evidence to permit conclusions concerning the effect on health outcomes, and
  2. Insufficient evidence to support improvement of the net health outcome, and
  3. Insufficient evidence to support improvement of the net health outcome as much as, or more than, established alternatives.

**Neuroepithelial Tumors:**

- HDC with autologous, tandem autologous or allogeneic HCT for an individual with a neuroepithelial tumor (e.g., ependymoma) is considered experimental or investigational based upon:
  1. Insufficient scientific evidence to permit conclusions concerning the effect on health outcomes, and
  2. Insufficient evidence to support improvement of the net health outcome, and
  3. Insufficient evidence to support improvement of the net health outcome as much as, or more than, established alternatives.

According to the source, although specific transplantation procedures may be considered experimental or investigational and therefore not eligible for coverage under standard medical benefits, these procedures may be eligible for coverage based upon Arizona Revised Statutes §20-2326 concerning Cancer Clinical Trials.

**Resources:**

- Literature reviewed 02/14/17. We do not include marketing materials, poster boards and non-published literature in our review.

The BCBS Association Medical Policy Reference Manual (MPRM) policy is included in our guideline review. References cited in the MPRM policy are not duplicated on this guideline.

Resources prior to 04/01/14 may be requested from the BCBSAZ Medical Policy and Technology Research Department.
