MASTECTOMY FOR THE TREATMENT OF FIBROCYSTIC BREAST DISEASE

Non-Discrimination Statement and Multi-Language Interpreter Services information are located at the end of this document.

Coverage for services, procedures, medical devices and drugs are dependent upon benefit eligibility as outlined in the member's specific benefit plan. This Medical Coverage Guideline must be read in its entirety to determine coverage eligibility, if any.

This Medical Coverage Guideline provides information related to coverage determinations only and does not imply that a service or treatment is clinically appropriate or inappropriate. The provider and the member are responsible for all decisions regarding the appropriateness of care. Providers should provide BCBSAZ complete medical rationale when requesting any exceptions to these guidelines.

The section identified as "Description" defines or describes a service, procedure, medical device or drug and is in no way intended as a statement of medical necessity and/or coverage.

The section identified as "Criteria" defines criteria to determine whether a service, procedure, medical device or drug is considered medically necessary or experimental or investigational.

State or federal mandates, e.g., FEP program, may dictate that any drug, device or biological product approved by the U.S. Food and Drug Administration (FDA) may not be considered experimental or investigational and thus the drug, device or biological product may be assessed only on the basis of medical necessity.

Medical Coverage Guidelines are subject to change as new information becomes available.

For purposes of this Medical Coverage Guideline, the terms "experimental" and "investigational" are considered to be interchangeable.

MASTECTOMY FOR THE TREATMENT OF FIBROCYSTIC BREAST DISEASE
(cont.)

Description:

Mastectomy is the surgical removal of a breast.

Total Mastectomy:
Removal of the majority of glandular breast tissue, some skin, and the nipple-areolar complex with preservation of the lymphatic drainage system.

Subcutaneous Mastectomy:
Removal of the majority of the glandular breast tissue with preservation of the skin, nipple, areola and lymphatic drainage system.

Definitions:

1st Degree Relative:
Blood-related sibling, parent or child.

Criteria:

- Mastectomy for the treatment of fibrocystic breast disease is considered ***medically necessary*** with documentation of **ALL** of the following:

  1. Fibrocystic breast disease diagnosed by **ONE** or more of the following:

     - Progressive pain and breast changes with periods
     - Discharge from nipples
     - Persistent and/or recurrent nodules or cysts
     - Mammographic changes or increase in number of cysts or fibrosis over a one year period
