Non-Discrimination Statement and Multi-Language Interpreter Services information are located at the end of this document.

Coverage for services, procedures, medical devices and drugs are dependent upon benefit eligibility as outlined in the member's specific benefit plan. This Medical Coverage Guideline must be read in its entirety to determine coverage eligibility, if any.

This Medical Coverage Guideline provides information related to coverage determinations only and does not imply that a service or treatment is clinically appropriate or inappropriate. The provider and the member are responsible for all decisions regarding the appropriateness of care. Providers should provide BCBSAZ complete medical rationale when requesting any exceptions to these guidelines.

The section identified as "Description" defines or describes a service, procedure, medical device or drug and is in no way intended as a statement of medical necessity and/or coverage.

The section identified as "Criteria" defines criteria to determine whether a service, procedure, medical device or drug is considered medically necessary or experimental or investigational.

State or federal mandates, e.g., FEP program, may dictate that any drug, device or biological product approved by the U.S. Food and Drug Administration (FDA) may not be considered experimental or investigational and thus the drug, device or biological product may be assessed only on the basis of medical necessity.

Medical Coverage Guidelines are subject to change as new information becomes available.

For purposes of this Medical Coverage Guideline, the terms "experimental" and "investigational" are considered to be interchangeable.

ARTIFICIAL RETINA (cont.)

Description:

The artificial retina has been investigated as a device to restore vision for individuals afflicted with blindness secondary to retinitis pigmentosa, hereditary retinal degeneration and age-related macular degeneration. Images are obtained by a small video camera worn externally on glasses, processed by externally worn microcomputers and transmitted to electrodes implanted within a subconjunctival retinal prosthesis to stimulate the optic nerve.

The Argus™ 16 and second generation Argus™ II are being investigated in clinical trials. In 2013, the FDA approved a humanitarian use device exemption (HDE) for the Argus II retinal prosthesis for use in individuals with severe to profound retinitis pigmentosa. Other devices in development include the Alpha-IMS, Boston Retinal Implant, EPIRET3, Intelligent Retinal Implant System, Learning Retinal Implant and Microelectrode-STIS.

Criteria:

- Artificial retina is considered ***experimental or investigational*** based upon:
 1. Lack of final approval from the Food and Drug Administration, and
 2. Insufficient scientific evidence to permit conclusions concerning the effect on health outcomes, and
 3. Insufficient evidence to support improvement of the net health outcome, and
 4. Insufficient evidence to support improvement of the net health outcome as much as, or more than, established alternatives, and
 5. Insufficient evidence to support improvement outside the investigational setting.
